Dataset

Education Statistics by World Bank

- The World Bank EdStats All Indicator Query holds over **4,000 internationally comparable indicators** that describe education access, progression, completion, literacy, teachers, population, and expenditures. The indicators cover the education cycle **from pre-primary to vocational and tertiary education**. The query also holds learning outcome data from **international and regional learning assessments** (e.g. PISA, TIMSS, PIRLS), **equity data** from household surveys, and **projection/attainment data to 2050**. For further information, please visit the EdStats website.^[1]

`pandas.melt`

- Unpivot a DataFrame from wide to long format, optionally leaving identifiers set.
- This function is useful to massage a DataFrame into a format where one or more columns are identifier variables (`id_vars`), while all other columns, considered measured variables (`value_vars`), are “unpivoted” to the row axis, leaving just two non-identifier columns, ‘variable’ and ‘value’.

Some Interesting Data Preprocessing

`pandas.melt`

```
education = education.melt(id_vars=['Country Name',  
    'Country Code', 'Indicator Name', 'Indicator Code'],  
    var_name='Year',  
    value_name='Value')
```
